

Huginn

A colleague in Bifrost

> *It helps you whenever you need, and still you decide.*

An assistant that works in your Bifrost project beside your team. It does the legwork, on your own hardware, and never changes a line on its own.

ASK · DRAFT · REVISE · REMEMBER · READ · WATCH

Hand it work.
It does the legwork.

Assign Huginn an issue, the way you would assign a colleague. It asks when the issue doesn't say enough, then drafts the change in your name.

ISSUE · ISSUE-12 — ASSIGNED TO HUGINN

Add a low-battery warning

ENGINEER · 09:02
Users should know before the battery dies.

HUGINN · 09:06 AI
A chirp, a light, or both?

ENGINEER · 09:11
Both.

HUGINN · 09:15 AI
Drafted CR-019 in your name for review.

CHANGE REQUEST · CR-019 — DRAFT · IN YOUR NAME

Low-battery warning

S-041	Chirp once a minute when the battery is low *"Chirp once a minute." — your comment*	Revised
S-042	Show an amber light when the battery is low	New
F-007	Link: fulfilled by S-041, S-042	Link
VC-044	Low-battery chirp interval	New
VC-045	Amber light at low battery	New

COMMENT SUBMIT YOU MERGE

01 **Assign**
An issue, to Huginn, like to anyone.

02 **It asks**
When the issue doesn't say enough.

03 **It drafts**
Lines, links and tests, in your name.

04 **It revises**
Comment on the draft and it is reworked.

05 **You decide**
A person approves. You merge.

It remembers what you told it.

Each project has a notebook that Huginn keeps: your answers, your comments, the reason you gave for "won't do", in your own words and with where they came from. The next issue reads them, so you only say it once.

PROJECT NOTEBOOK

"Warnings are both a chirp and a light."
ANSWER · ISSUE-12

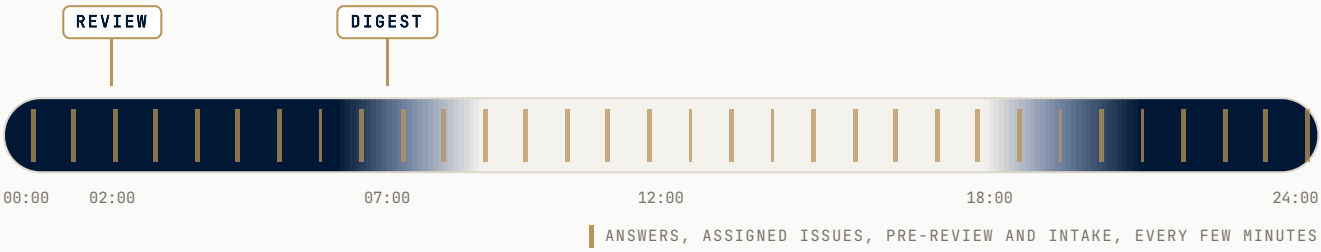

"Chirp once a minute."
COMMENT · CR-019

It never changes a line. Huginn drafts. A person submits, approves and merges.

ON ITS OWN

And it keeps watch on its own.

Some jobs run every night, some within minutes, and any of them on demand. One narrow question at a time.

OVERNIGHT

Review every changed line

Each line that changed, against the rules of its layer.

Wording · Chain of links · Tests · Duplicates · Contradictions · Stale values · Evidence

WITHIN MINUTES OF A TAG

Answers in the thread

Tag @Huginn on a requirement or an issue.

> IN THIS PROJECT
> S-012 asks for 85 dBA at 3 m; VC-031 measures at 1 m.
> IN PRACTICE
> Alarms are tested at the distance the requirement names.
> SUGGESTION
> Move VC-031 to 3 m.

ON SUBMIT

Change request pre-review

Read first, before a person looks: what a merge would break, which tests stop closing, and where the reviewer should look.

> HUGINN · AI · ON CR-019
> Merging leaves S-030 without a test: VC-040 stops closing. Look at S-041 first.

EVERY MORNING

Your digest

One card on the desk and the phone.

- CR-019 waits for your review
- ISSUE-12: Huginn asked you a question
- VC-045 is ready to run

WITHIN MINUTES OF A DROP

Read the customer's mail

A mail, a Word document or a PDF on Intake: the requirements in it, each beside the customer's sentence.

> CHANGE TO S-012
> The alarm shall sound at least ~~85~~ 90 dBA at 3 m.

WHILE YOU ANSWER

Interview you about their sheet

Drop an Excel or Word specification. Huginn asks, a stage at a time, and drafts the model in your name.

> HUGINN ASKS
> Line 2.1 holds two requirements. Split it?

Few flags, and the right ones.

Quotes its reason

A finding names the words it objects to.

Checks twice

A second, fresh look before anything is posted.

Dismissed stays dismissed

A finding you dismiss does not come back.

YOUR BUILDING, YOUR RULES

Your hardware.
Your data stays in the building.

Huginn runs on a machine in your building with a local model. Each job picks its model, and your data rules choose.

On site

A Huginn box in your building runs a local model. Nothing leaves the site.

Frontier AI

A frontier model for the hardest questions, where your data rules allow it.

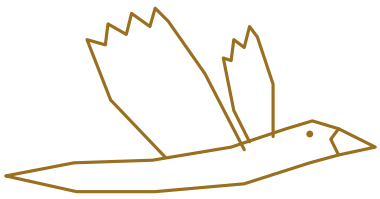

Both

Each job picks its model. Sensitive work stays local.

A colleague with narrow rights.

- **Its own name.** One shared assistant for the team, marked as itself on everything it writes.
- **Projects you give it.** An admin decides which projects it works on.
- **Where you already work.** Its answers, issues and drafts appear in the Workbench and on the phone. No new screen to learn.
- **You decide.** It never submits, approves or merges.

> *Huginn, a colleague in Bifrost. It helps you whenever you need, and still you decide.*

Put Huginn to work.

We set it up on your hardware, connect it to your Bifrost and run its first weeks with your team.
